The motor typically ranges from 250 to 750 watts, while the battery capacity can affect how far and how fast you can ride. Features such as adjustable seats, built-in storage, and safety components like lights and reflectors should also be on your checklist. Take the time to assess your personal preferences, such as whether you prefer a step-through frame for easy mounting or a more traditional design. Ultimately, a thoughtful evaluation of these factors will help you choose a tricycle that enhances your riding experience.
